### DESCRIPTION

The VOT8024AD consists of a GaAs IRLED optically coupled to a photosensitive zero crossing TRIAC packaged in a board space saving DIP-4 package.

The VOT8024AD isolates low-voltage logic from 120 V<sub>AC</sub>, 240 V<sub>AC</sub>, and 380 V<sub>AC</sub> lines to control resistive, inductive, or capacitive loads including motors, solenoids, high current thyristors or TRIAC and relays.

**Note**

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.  
This phototriac should not be used to drive a load directly. It is intended to be a trigger device only
