

## Surface Mount Multilayer Ceramic Chip Capacitors for Safety Certified Applications

### FEATURES

- Approved IEC 60384-14
- Specialty: safety certified capacitors
- AEC-Q200 qualified available with PPAP
- Wet build process
- Reliable Noble Metal Electrode (NME) system
- Flexible termination “W” for improved bending capability performance available for selected values
- Material categorization:  
for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

### APPLICATIONS

- Power supplies
- EMI and AC line filtering
- EV charging systems
- AC equipment and appliances
- Lighting strike and voltage surge protection
- Isolators
- Facsimile and telephone

### LINKS TO ADDITIONAL RESOURCES

### ELECTRICAL SPECIFICATIONS

#### Note

- Electrical characteristics at +25 °C unless otherwise specified

**Operating Temperature:** -55 °C to +125 °C

**Capacitance Range X1 / Y2 <sup>(1)</sup>:**

C0G (NP0): 10 pF to 1.0 nF

X7R: 100 pF to 4.7 nF

**Capacitance Range X2 <sup>(1)</sup>:**

C0G (NP0): 10 pF to 390 pF

X7R: 100 pF to 12 nF

**Voltage Range:** 250 V<sub>AC</sub>

**Temperature Coefficient of Capacitance (TCC):**

C0G (NP0): 0 ppm/°C ± 30 ppm/°C from -55 °C to +125 °C

X7R: ± 15 % from -55 °C to +125 °C, with 0 V<sub>DC</sub> applied

**Dissipation Factor (DF) <sup>(1)</sup>:**

C0G (NP0): 0.1 % maximum

X7R: 2.5 % maximum

**Insulating Resistance:**

at +25 °C 100 000 MΩ min. or 1000 ΩF whichever is less

at +125 °C 10 000 MΩ min. or 100 ΩF whichever is less

#### Note

<sup>(1)</sup> Test conditions per IEC 60384-14:

C0G (NP0): 1.0 V<sub>RMS</sub> at 1 MHz

X7R: 1.0 V<sub>RMS</sub> at 1 kHz

#### Aging Rate:

C0G (NP0): 0 % maximum per decade

X7R: 1 % maximum per decade

#### Voltage Proof Test:

X1 / Y2: min. 1500 V<sub>AC</sub>

X2: min. 1075 V<sub>DC</sub>

#### Peak Impulse Voltage:

X1 / Y2: 5000 V

X2: 2500 V

#### Voltage Rating DC:

X1 / Y2: 2000 V<sub>DC</sub>

X2: 1500 V<sub>DC</sub>

#### Climatic Category According to EN 60068-1:

55/125/21

## QUICK REFERENCE DATA

| DIELECTRIC          | CASE | MAXIMUM VOLTAGE<br>(V <sub>AC</sub> ) | CAPACITANCE |         |
|---------------------|------|---------------------------------------|-------------|---------|
|                     |      |                                       | MINIMUM     | MAXIMUM |
| C0G (NP0) (X1 / Y2) | 2008 | 250                                   | 10 pF       | 220 pF  |
|                     | 2220 | 250                                   | 47 pF       | 1.0 nF  |
| C0G (NP0) (X2)      | 2008 | 250                                   | 10 pF       | 390 pF  |
| X7R (X1 / Y2)       | 2008 | 250                                   | 100 pF      | 1.0 nF  |
|                     | 2220 | 250                                   | 270 pF      | 4.7 nF  |
| X7R (X2)            | 2008 | 250                                   | 100 pF      | 2.7 nF  |
|                     | 2220 | 250                                   | 270 pF      | 12 nF   |

## Notes

- Detail ratings see “Selection Chart”
- Size 2008 is compatible with 1808 solderlands and full conform with the IEC-60384-14 requirements for creepage distance

## ORDERING INFORMATION

| # Quality management system according to ISO 9001       | Yes |
| # Environmental certification according to ISO 14001    | Yes |
| # Health and safety system according to ISO 45001       | Yes |

**STORAGE AND HANDLING CONDITIONS**

(1) Store the components at 5 °C to 40 °C ambient temperature and ≤ 70 % relative humidity conditions.

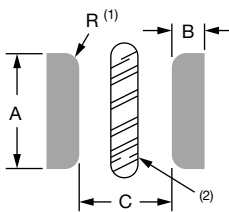

(2) The product is recommended to be used within a time-frame of 2 years after shipment.

Check solderability in case extended shelf life beyond the expiry date is needed.

**Precautions:**

- Do not store products in an environment containing corrosive elements, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. This may cause corrosion or oxidization of the terminations, which can easily lead to poor soldering.
- Store products on the shelf and avoid exposure to moisture or dust.
- Do not expose products to excessive shock, vibration, direct sunlight and so on.

## Solder Pad Dimensions for Vishay Surface-Mount Multilayer Ceramic Chip Capacitors

| DIMENSIONS in millimeters   |                     |      |                     |
|---|---------------------|------|---------------------|
|  |                     |      |                     |

| 4044  | 12.30               | 2.00 | 8.00                |

### Notes

- <sup>(1)</sup> For safety capacitors and voltages above 3000 V, corner rounding (R) of 0.5 mm is recommended to suppress arcing
- <sup>(2)</sup> Add a 1 mm slot in PCB between pads to allow cleaning and coating under MLCC
- <sup>(3)</sup> For VJ HiFREQ Series, this dimension is 0.6 mm
- <sup>(4)</sup> For safety capacitors, the A dimension should be 5.80 mm

## PRINTED CIRCUIT BOARD PCB DESIGN CONSIDERATIONS FOR HIGH VOLTAGE SURFACE-MOUNT MLCCS

Special assembly process and design considerations should be employed for today's high voltage rating MLCCs. As case sizes remain the same and voltage ratings increase, MLCC manufacturers must design, evaluate, and qualify their capacitors using methods that reduce the occurrence of corona discharge and arcover events. To meet similar capability in high voltage applications, users should employ similar cautionary design and assembly methods.

### MLCC PAD LAYOUT

A capacitor's arcover inception point can degrade due to factors such as the MLCC termination, PCB pad design, PCB cleanliness, solder flux residue, surface contamination / deposits and environmental conditions. PCB pads and their design affect the air gap distance between the opposing polarities of the MLCC termination. For voltage rating greater than 1500 V<sub>DC</sub> add a corner radius to the inward facing edge of the MLCC pads and as large a gap as possible between the pads. Too small of a pad gap distance will reduce the capacitor's own arcover inception voltage level. Refer to the Figure and Table Figure 1.0, MLCC Pad Layout and Table 1.0, Vishay MLCC Solder Pad Dimensions for the recommended MLCC solder pad dimensions.

### SLOT OR TRENCH BETWEEN PADS

PCB assembly can deposit dust, trap solder balls, or flux residue underneath the capacitors. These contaminants will reduce conductive clearances and the arcover inception level. Assembly methods must include a final PCB cleaning process. A slot or trench can be cut into the PCB in between the pads to allow cleaners to penetrate underneath the MLCC. The slot will also allow conformal or epoxy coatings to flow underneath the MLCC and build an insulative barrier between pads. Refer to Figure 1.0 MLCC Pad Layout for slot reference location.

### COATING PRINTED CIRCUIT BOARD

Coating a printed circuit board with materials such as acrylic, silicone and urethane resins provide a protective dielectric barrier that is non-conductive and will enhance the resistance to arcing. Various processes exist which include dipping, brushing, and spraying. Optimal performance will come from coating the MLCC on all sides, top and bottom. The PCB slot in between the pads should extend slightly beyond the width of the MLCC. Refer to Figure 1.0 MLCC Pad Layout for slot reference location.

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Vishay"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and / or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.
