CONSTRUCTION DESCRIPTION

Low inductive wound cell elements of metallized polypropylene film, potted with resin in a flame retardant case.

SPECIFIC METHOD OF MOUNTING TO WITHSTAND VIBRATION AND SHOCK

The capacitor unit is designed for mounting on a printed circuit board.

In order to withstand vibration and shock tests, it must be insured that the stand-off pips are in good contact with the printed circuit board.

The capacitors shall be mechanically fixed by the leads and the body clamped.

SPACE REQUIREMENTS ON PRINTED-CIRCUIT BOARD

For product height with seating plane as given by "IEC 60717" as reference.

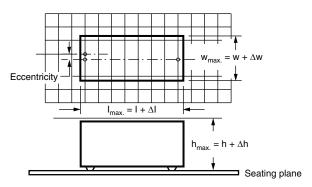

For 2 pins:

The maximum space for length ($l_{max.}$), width ($w_{max.}$) and height ($h_{max.}$) of film capacitors to take in account on the printed circuit board is shown in the drawings.

- For products with 15 mm < pitch \leq 27.5 mm Δ w = Δ l = 0.5 mm and Δ h = 0.1 mm
- For products with pitch = 37.5 mm, $\Delta w = \Delta I = 0.7$ mm and $\Delta h = 0.5$ mm
- For products with pitch = 52.5 mm, $\Delta w = \Delta l = 1.0$ mm and $\Delta h = 0.5$ mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

The maximum length and width of film capacitors is shown in the figure:

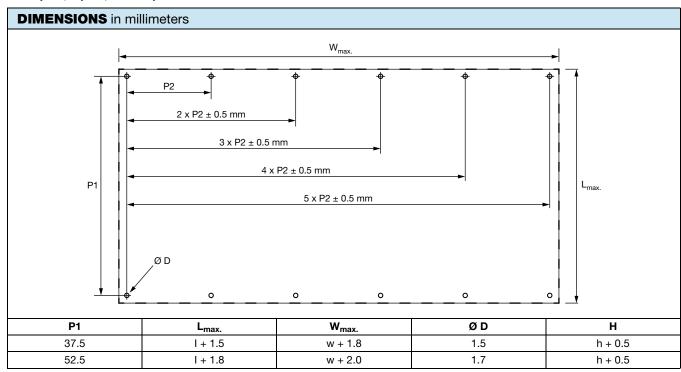

For the minimum product dimensions for length (I_{min.}), width (w_{min.}) and height (h_{min.}) following tolerances of the components are valid:

 $I_{min.} = I - \Delta I$, $w_{min.} = w - \Delta w$, and $h_{min.} = h - \Delta h$ following

- for products with 15 mm < pitch \leq 27.5 mm, $\Delta I = 1.0$ mm, and $\Delta w = \Delta h = 0.5$ mm
- for products with pitch = 37.5 mm, $\Delta I = 1.0$ mm, and $\Delta w = \Delta h = 1.0$ mm
- for products with pitch = 52.5 mm, $\Delta I = 1.5$ mm, and $\Delta w = \Delta h = 1.0$ mm

For 4 pins, 6 pins, and 12 pins:

SOLDERING CONDITIONS

For general soldering conditions and wave soldering profile we refer to the document "Soldering Conditions Vishay Film Capacitors": www.vishay.com/doc?28171

STORAGE TEMPERATURE

 T_{stg} = -25 °C to +35 °C with relative humidity of maximum 75 % without condensation

Unless otherwise specified, all electrical values apply to an ambient temperature of 23 °C \pm 1 °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 % \pm 2 %.

For reference testing, a conditioning period shall be applied over 96 h \pm 4 h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free air ambient temperature.

The component temperature rise (ΔT) can be measured or calculated by $\Delta T = P/G$:

- ΔT = T_{case} T_{ambient} = case temperature rise (°C) with a maximum of 15 °C at rated temperature.
- P = I_{RMS}² x ESR = power dissipation of the component (mW)
- G = heat conductivity of the component (mW/°C)

MEASURING THE COMPONENT TEMPERATURE

The case temperature is measured in unloaded condition (T_{amb}) and loaded condition (T_C).

To avoid external thermal radiation or convection, the capacitor must be tested in a closed area, free from air circulation.

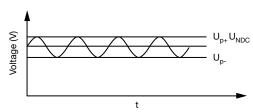

APPLICATION NOTES AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

To select the capacitor for a certain application, the following conditions must be checked:

- 1. The continuous peak voltage (U_{D+}) shall not exceed the DC voltage rating (U_{NDC})
- 2. The peak-to-peak ripple voltage (U_{pp}) shall not be greater than 0.2 x U_{NDC}

Non reversing recurrent waveform

- 3. For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact dc-film@vishay.com.
- 4. The voltage peak slope (dU/dt) shall not exceed the pulse slope at the DC voltage rating. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by U_{NDC} and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_{0}^{T} \left(\frac{dU}{dt}\right)^{2} \times dt < U_{NDC} \times \left(\frac{dU}{dt}\right)_{rated}$$

T is the pulse duration

| MAXIMUM REPETITIVE PEAK VOLTAGES | |
|----------------------------------|--------------------------|
| REPETITIVE SURGE VOLTAGE | MAXIMUM DURATION PER DAY |
| 1.1 x U _{NDC} | 30 % of on load duration |
| 1.15 x U _{NDC} | 30 min |
| 1.2 x U _{NDC} | 5 min |
| 1.3 x U _{NDC} | 1 min |
| 1.5 x U _{NDC} | 110 ms |

Note

· The capacitor unit may be subjected to the surge above without any significant reduction of lifetime expectancy
