High Power Thin Film Wraparound Chip Resistor AEC-Q200 Qualified

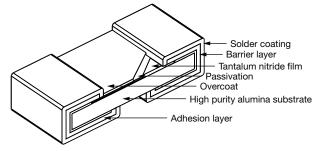

LINKS TO ADDITIONAL RESOURCES

PHPA series chip resistors incorporate the self passivated enhanced tantalum nitride film to give superior moisture resistance, ESD, voltage coefficient, and resistance stability performance. They are designed with enlarged backside terminations to reduce the thermal resistance between the topside resistor layer and the solder joint on the end user's circuit board.

Actual power handling capability is limited by the end user mounting process. As with any high power chip resistor the ability to remove the generated heat is critical to the overall performance of the device.

CONSTRUCTION

FEATURES

- AEC-Q200 qualified
- ESD rating 5A (HBM)
- · Moisture resistant
- High purity ceramic substrate
- Power rating to 2.5 W
- Resistance range 10 Ω to 30.1 k Ω
- Resistor tolerance to ± 0.1 %
- TCR to ± 25 ppm/°C
- Flame resistant UL 94 V-0
- Material categorization: for definitions of compliance please see <u>www.vishav.com/doc?99912</u>

APPLICATIONS

- Power supplies
- Power switching
- · Braking system
- · Test and measurement equipment
- Motor deflection circuits

Notes

Chip surface temperature measured using FLIR A40 thermal imaging system with an approximate test card surface temperature of 25 °C

- Thermal imaging was conducted under ambient conditions resulting in a steady state test card surface temperature of 85 °C over the full range of power levels
- Thermal imaging and load life testing was conducted mounting one device to 2" x 3" test cards with 2.5 mil copper plating on both surfaces. Thermal vias on 120 mil centers were utilized for heat transfer between surfaces of the test card
